

CARAVAN MAINTENANCE

Your caravan should be checked over by a professional before you embark on your journey and on a regular basis if you are travelling for a prolonged period.

Here are the main things that need to be checked:

- Brakes (ensure they are inspected by a specialist)
- Jockey wheel
- Wheel bearings
- Safety chain
- Water tank & fittings
- Exterior of the van (check for cracks, holes, water damage)
- Interior of the van (ensure everything is firmly fixed even after bumpy roads, check for cracks and water damage near windows and the door)
- Gas fittings (check that gas cylinders and regulators are up to date and that connections and don't leak)
- Miscellaneous (check the manufacturer's handbook for any other items that should be maintained on a regular basis)
